

iF647 Anti-Human CD21 Antibody

Catalog Number:	108905, 108906
Size:	25 tests, 100 tests
Target Name:	CD21, Complement C3d receptor (C3dR), complement receptor 2 (CR2), Epstein-Barr virus receptor
Regulatory Status:	RUO

PRODUCT DETAILS

Clone:	THB5
Application:	Flow Cytometry
Reactivity:	Human
Format:	iF647
Isotype:	Mouse IgG2a
Antibody Type:	Monoclonal
Formulation:	Phosphate-buffered solution, pH 7.2, containing 0.09% sodium azide and 0.2% (w/v) BSA
Protein Concentration:	Supplied at a lot-specific concentration.
Storage and Handling:	The antibody solution should be stored undiluted between 2°C and 8°C, and protected from prolonged exposure to light. Do not freeze.
Recommended Usage:	For flow cytometric staining, it is recommended to use 5 µL of this reagent per 0.5-1.0 million cells in a 100 µL volume. Optimal reagent performance should be determined by titration for each specific application. iF647 has an excitation max at 656 nm and an emission max at 670 nm.
Excitation Laser:	Red Laser (633 nm)
Isotype Control:	302607

BACKGROUND INFORMATION

CD21, also known as complement receptor 2 (CR2), is a surface glycoprotein expressed primarily on mature B cells, follicular dendritic cells, and certain epithelial cells. It serves as a receptor for complement fragments and viral particles, playing a central role in regulating adaptive immune responses. CD21 is essential for the activation and maturation of B cells, helping to lower the threshold for B cell receptor (BCR) signaling by binding complement-tagged antigens, thereby enhancing antibody production and immune memory formation.

Structurally, CD21 is a type I transmembrane protein of approximately 145 kDa and belongs to the regulators of complement activation (RCA) family. It comprises 15 or 16 extracellular short consensus repeats (SCRs), each containing about 60 amino acid residues stabilized by disulfide bonds. These SCR domains contribute to ligand recognition and binding, while the short cytoplasmic tail participates in intracellular signaling through interactions with other surface molecules, such as CD19 and CD81, forming the B cell co-receptor complex. This multimolecular complex plays a critical role in amplifying B cell activation in response to antigen

engagement.

The principal ligands for CD21 are complement fragments C3d, iC3b, and C3dg, which are generated during complement activation. CD21 also acts as a receptor for the Epstein-Barr virus (EBV) glycoprotein gp350/220, facilitating viral entry into B cells and establishing latent infection. This dual function - immune modulation and viral susceptibility - underpins its significance in both health and disease.

CD21 involvement in disease extends beyond viral infection. Dysregulation of CD21 expression or signaling contributes to immune-related disorders such as systemic lupus erythematosus (SLE), where altered receptor levels impair clearance of immune complexes and promote autoreactivity. In chronic lymphocytic leukemia (CLL) and some lymphomas, CD21 expression serves as a diagnostic and phenotypic marker for subtyping B cell malignancies. Conversely, its engagement by EBV plays a role in the development of EBV-associated cancers such as Burkitt lymphoma and nasopharyngeal carcinoma.

Therapeutically, CD21 offers potential as a target for modulating immune function and managing infection or autoimmunity. Inhibition of CD21-Epstein-Barr virus interactions represents a strategy for preventing viral infection, while modulation of the CD21-C3d pathway may fine-tune B cell responses in autoimmune and vaccine contexts. Ongoing studies continue to define how manipulating CD21 signaling could optimize immunotherapy and immune tolerance.

PRODUCT DATA

Human peripheral blood lymphocytes stained with anti-Human CD19 iF488 (FITC) and iF647 anti-human CD21 clone THB5 (red histogram, right panel) or an isotype control (Middle panel).

This product is supplied subject to the terms and conditions at www.innocyto.com/web/terms.php and may only be used as provided in the stated terms. Products are for Research Use Only.
